# NxTechWorks

Your trusted partner in innovating emerging technology solutions that benefit your clients and communities

What we do

Help you turn your ideas into reality
.

Ideate

Take your problem statement as an opportunity to research and innovate

Prototype

Create a proof of concept as the next step to validate the idea and its benefits

Co-create

Work with you to build, test and deploy end to end solutions that you can take to your business or clients
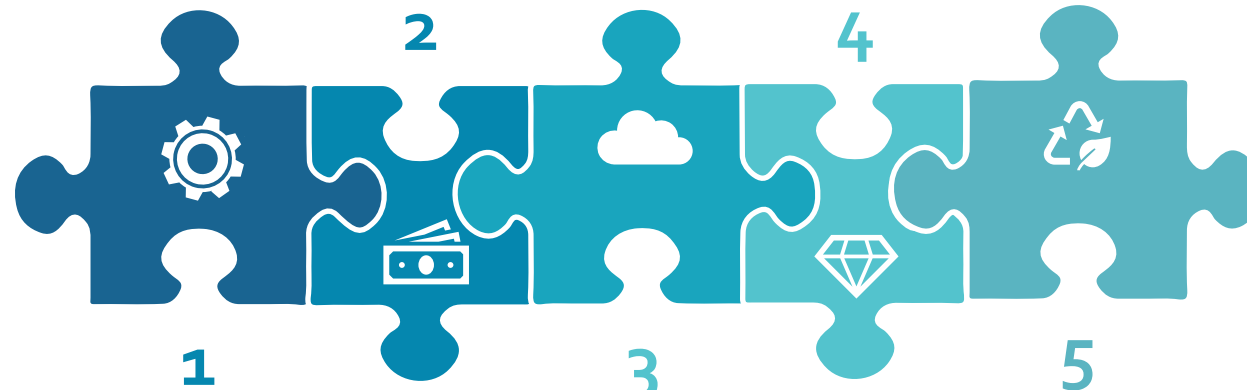

In a frugal way

Think big, start small and scale fast

.

Keep cost low

Use open source technology and lean team structure

Create value

Create value through leapfrog technology

2

4

1

3

5

Focus on essentials

Focus on bare essentials to prove core benefits and functionality

Optimize resources

Leverage the cloud technology to keep infra costs minimum

Scale and sustain

Use design thinking to scale up from a prototype to a fully functional solution
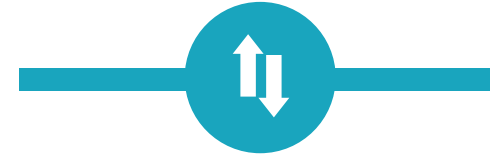

Our team

Diversified experience and complementary skills help us innovate better

Business consultant

20 years of diversified experience in the water industry including developing and implementing business and marketing strategies for IT solutions
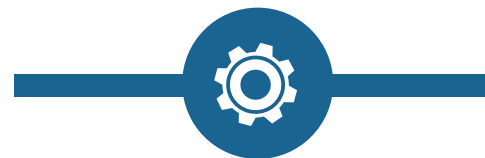

Technology consultant

17 years of experience in IT with 5+ years in researching emerging technology solutions for supply chain, utilities, sharing economy and customer experience
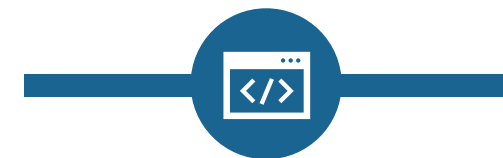

Technology architect

Over 15 years of IT experience in designing and developing enterprise applications. Lead a team of developers for building native applications in AI, IoT and Blockchain

Senior software developer

10 years of IT experience in Java/J2EE and Java script application development. Built and maintained various enterprise applications using Java Spring and Struts framework and web services using REST based APIs

User interface expert

Overall 9 years of IT experience in developing web applications. Skilled in front end development using advance JavaScript, J-query, AngularJS, and ReactJS for various industry domains including banking, retail and logistics
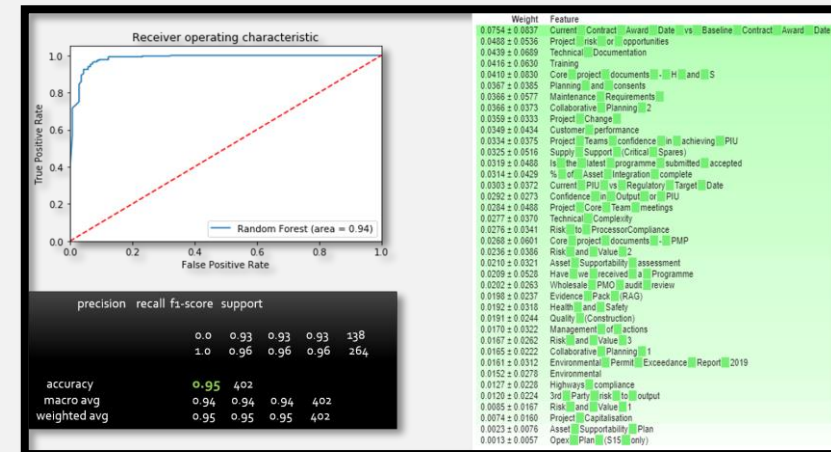

Our focus areas

Emerging technologies

Machine Intelligence

- Predicting performance of projects based of historical data using machine learning
- Object detection from video or image file using AI algorithm
- Identifying text from scanned documents using AI

Object detection using AI algorithm

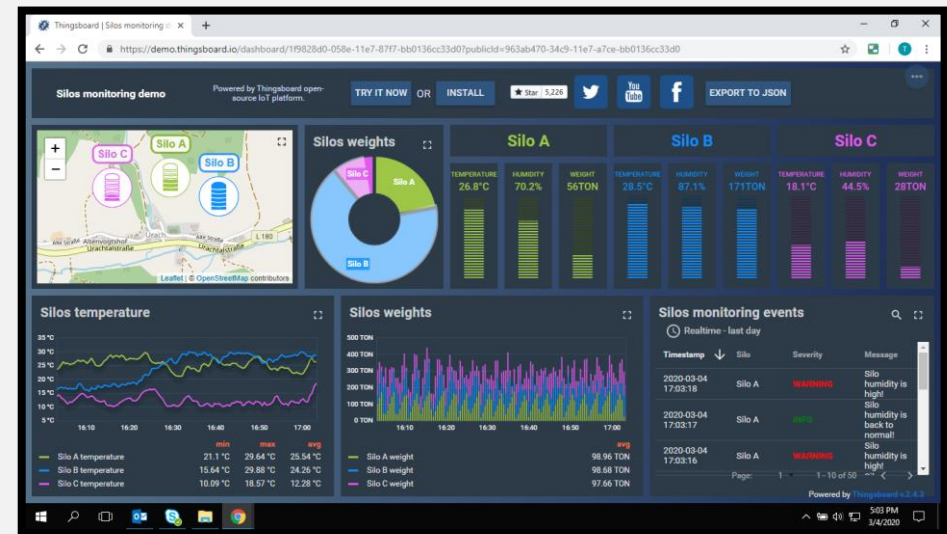

Predict project performance using ML

Blockchain

- Shared mobility for smart cities
- Self-Sovereign Identity for Certificate Authentication
- Supply chain management
- Asset management

Internet of Things (IoT)

- Device management
- Data collection
- Data processing
- Visualization

Data Analytics

- Business intelligence solutions using
  - Power BI
  - Tableau
  - Google Data Studio
  - Custom BI application development
